10	1	<p><b>PRIOPACK</b> <b>Storage container for safe storage of rechargeable lithium-ion batteries</b></p> <p>Storage containers for the storage of defective or damaged batteries with increased fire risk and for minimising the toxic fumes associated with a thermal runaway.</p> <p>The storage container is lined with a non-combustible thermal insulation material and has a fire resistance of 90 minutes. Additional filling and insulating material, which can absorb leaking electrolytes, completely encloses the Li-Ion batteries to be stored.</p> <p>This means that even with a thermal runaway - a chemical reaction with extreme heat development - the danger of fire spreading is prevented and the generation of toxic gases is minimised.</p> <ul style="list-style-type: none"><li>• Fire resistant storage containers</li><li>• Storage containers made of plastic</li><li>• Closure by means of hinged cover and snap lock</li><li>• Tight-closing cover</li><li>• Tight closure, including in case of fire – no lifting up of the cover</li><li>• Lined with a nonflammable thermal insulation material</li><li>• Colour grey</li></ul>
